

SOLUTIONS IN FIRE RISK

Fire risk - What is it?

Accidents or incidents due to failures in Fire Prevention, Fire Protection and Fire Precautions in your organisation.

Is there a problem with it?

Yes, because the consequences of getting fire safety wrong can be multiple deaths.

Does it matter?

Yes, because every employer should avoid the risk of serious injury or death to their employees, visitors and members of the public caused by fire. These requirements are a legal duty and you need to comply. Indeed the responsibility for fire safety has now clearly been placed on all employers or controllers of premises.

Why should we bother?

It will save you money on insurance, compensation and legal sanctions. It is good to let your customers know that you take health and safety seriously and to be able to demonstrate that you are a company that believes in quality.

What should we do?

Speak to JRL Solutions Ltd who will provide basic advice on how to proceed and at your request will visit and carry out the requirements for you, particularly by doing a Fire Risk Assessment.

What does the assessment entail?

Assessment is carried out to a procedure, which fully embraces all the standards within fire legislation. Following assessment the findings are evaluated and recommendations are made to reduce the risk from fire.

Is there anything else we should do?

Yes, the assessment may show it is necessary to train your people in your fire precaution measures.
